

Our Teeth Eggsperiment

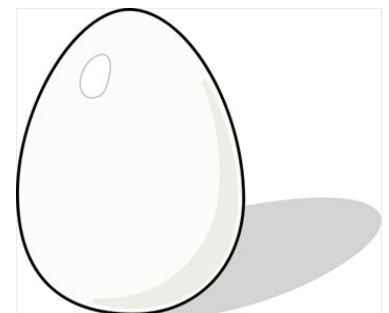

Name _____

The experiment:

Eggshells and teeth are similar, so we will use an eggshell to see what different drinks could do to our teeth. We also will brush the eggshell with toothpaste to see how toothpaste and brushing affects our teeth.

The background information:

In teeth, calcium is in the enamel, or coating, of a tooth. Calcium helps protect teeth against damage from eating and drinking. In eggshells, calcium helps create the strong shell that protects the egg from damage.

Experiment 1: We will soak an egg
in milk overnight.

This is what I predict will happen.

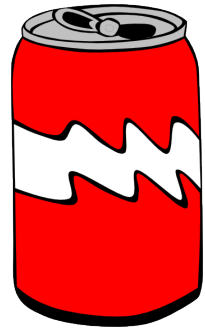

This is what actually happened.

The next day, we brushed the egg with a
toothbrush and toothpaste. This is what
happened.

What I learned about drinking milk and how it
could affect my teeth is...

Experiment 2: We will soak an egg in soda overnight.

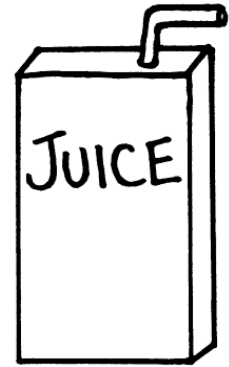

This is what I predict will happen.

This is what actually happened.

The next day, we brushed the egg with a toothbrush and toothpaste. This is what happened.

What I learned about drinking soda and how it could affect my teeth is...

Experiment 3: We will soak an egg in fruit juice overnight.

This is what I predict will happen.

This is what actually happened.

The next day, we brushed the egg with a toothbrush and toothpaste. This is what happened.

What I learned about drinking fruit juice and how it could affect my teeth is...

Experiment 4: We will soak an egg
in water overnight.

This is what I predict will happen.

This is what actually happened.

The next day, we brushed the egg with a
toothbrush and toothpaste. This is what
happened.

What I learned about drinking water and how
it could affect my teeth is...

Thank you for downloading my product! Your purchase is for ONE personal classroom use.

This work was made by my [Shannon MacMillan](#). Please leave me feedback if you used this in your classroom. If by chance you find an error, please e-mail me at smacmillan@pvsd.org.

Special thank you for the graphics in this product.
